Completed	Monday, 19 October 2026, 12:45 PM
Duration	4 mins 59 secs
Grade	**15.00** out of 15.00 (**100**%)

Question **1**

Correct

Mark 1.00 out of 1.00

What is the key characteristic of binary search?

a. It compares elements sequentially
b. It works on unsorted lists
c. It can be applied only if the list is sorted ✓
d. It always starts from the beginning of the list

Question **2**

Correct

Mark 1.00 out of 1.00

If the target element is greater than the middle element in binary search, where does the search continue?

a. In the middle of the list
b. In the right sublist ✓
c. In the left sublist
d. At the beginning of the list

Question **3**

Correct

Mark 1.00 out of 1.00

In linear search, if the target element is not found in the list, what is the result?

a. The first element is returned
b. The search is considered unsuccessful ✓
c. The last element is returned
d. An error is raised

Question **4**

Correct

Mark 1.00 out of 1.00

What happens when the element is found in linear search?

a. The search continues until the end of the list
b. The search backtracks to find duplicate elements
c. The search starts over from the beginning
d. The search stops immediately ✓

Question **5**

Correct

Mark 1.00 out of 1.00

In binary search, what happens if the middle element does not match the target element?

a. The search continues from the beginning
b. The search continues in the left or right sublist ✓
c. The list is sorted
d. The search stops

Question **6**

Correct

Mark 1.00 out of 1.00

_____ search takes a sorted/ordered list and divides it in the middle.

a. Binary ✓
b. Linear
c. Both (1) & (3)
d. Hash

Question **7**

Correct

Mark 1.00 out of 1.00

In the context of searching, what is a successful search?

a. When the element is found in the list ✓
b. When the list is sorted
c. When the search algorithm finishes
d. When the list contains duplicate elements

Question **8**

Correct

Mark 1.00 out of 1.00

In binary search, if the target element is less than the middle element, where does the search continue?

a. In the right sublist
b. In the entire list
c. In the left sublist ✓
d. At the beginning of the list

Question **9**

Correct

Mark 1.00 out of 1.00

In _____ checks the elements of a list, one at a time, without skipping any element.

a. Hash search
b. Both (1) & (3)
c. Binary search
d. Linear search ✓

Question **10**

Correct

Mark 1.00 out of 1.00

_____sort is the simplest sorting algorithm that works by repeatedly swapping the adjacent elements in case they are unordered in n-1 passes.

a. Bubble ✓
b. Selection
c. Insertion
d. Complexity

Question **11**

Correct

Mark 1.00 out of 1.00

Given an array arr = {45,77,89,90,94,99,100} and key = 100; What are the mid values(corresponding array elements) generated in the first and second iterations?

a. 89 and 94

b. 90 and 99 ✓

c. 90 and 100

d. 94 and 99

Question **12**

Correct

Mark 1.00 out of 1.00

Given an array arr = {45,77,89,90,94,99,100} and key = 99; what are the mid values(corresponding array elements) in the first and second levels of recursion?

a. 89 and 99

b. 90 and 94

c. 89 and 94

d. 90 and 99 ✓

Question **13**

Correct

Mark 1.00 out of 1.00

In binary search, how is the middle element determined?

a. By using a hash function

b. By comparing each element sequentially

c. By starting from the first element

d. By dividing the list length by two ✓

Question **14**

Correct

Mark 1.00 out of 1.00

What is the first step in binary search?

a. Divide the list into two equal parts

b. Sort the list

c. Compare the target element with the first element in the list

d. Compare the target element with the middle element in the list ✓

Question **15**

Correct

Mark 1.00 out of 1.00

The average case occurs in the linear search algorithm

a. When the item is not the array at all

b. Item is the last element in the array or item is not there at all

c. When the item is somewhere in the middle of the array ✓

d. When the item is the last element in the array
